

SoverRaven

The autonomous agentic layer for Ravencoin.
Off-chain logic. On-chain settlement.

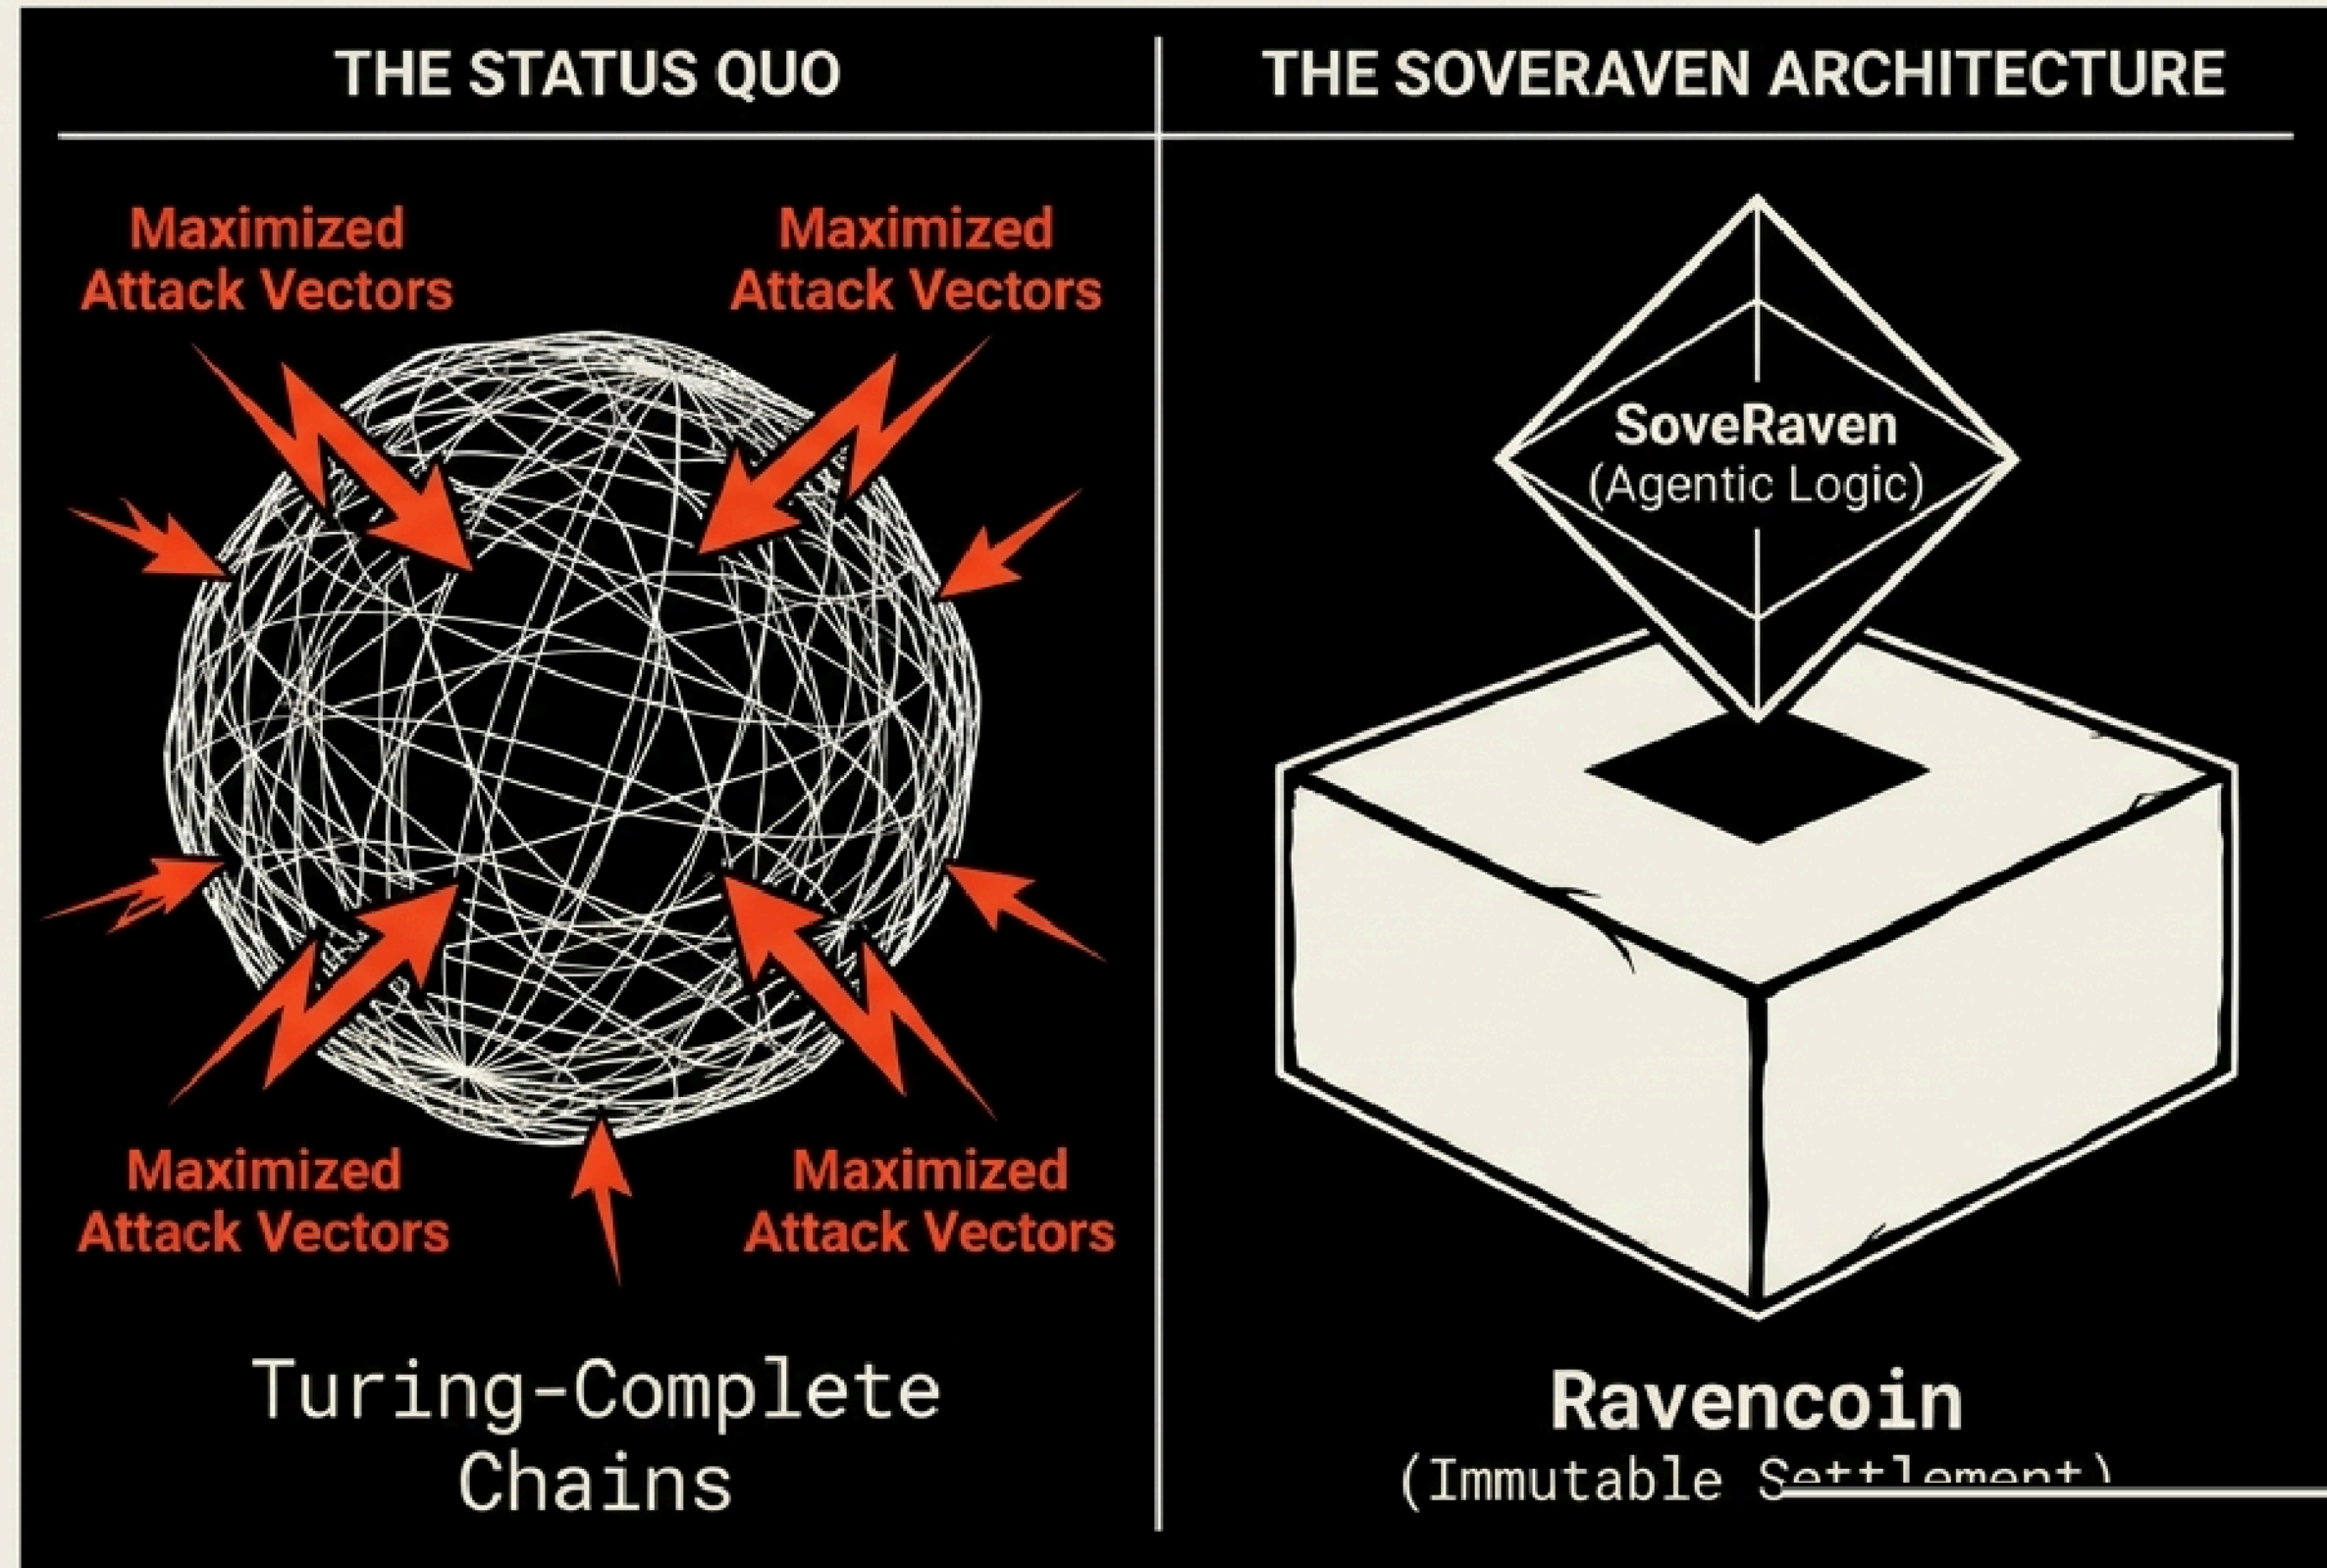

Why no smart contracts on Ravencoin?

Smart contracts bloat the base layer and maximize attack surfaces.

Ravencoin's non-Turing-completeness is its greatest security feature.

SoveRaven adds programmable finance strictly off-chain.

Agents think and negotiate. The chain stays pristine.

Why heritage as license?

We reject centralized databases and mutable NFTs. We use unfakeable 2018 Genesis assets as the root of trust.

The asset itself is the permission structure. Hold the asset, the software works. Sell the asset, the license transfers. Cryptographic history cannot be faked.

Tiered Permission Matrix			
	Asset LEGENDRVN	Tier Architect	Capabilities Unlimited agents, cross-chain yield routing, white-labeling.
	Asset LEGENDRVN/NODE_01	Tier Operator	Capabilities One dedicated agent for DeFi, escrow, automated dividends.
	Asset LEGENDRVN#SN_001	Tier Collector	Capabilities Custom-trained personality, A2A deal-making.

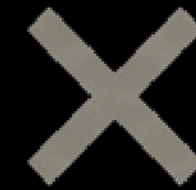

Why Shamir not MPC?

We deliberately reject the entire attack surface of python-native TSS.

Shamir is deterministic and immune to TSSHOCK.

SoveRaven is an autonomous agent—we optimize for battle-tested cryptography over theoretical threshold convenience.

Sharing

Vulnerable to
2025 TSSHOCK
silent key
extraction via
python-native
libraries.

Mathematically
proven

Trivially
verifiable

Zero persistent
memory

What does the HITL threshold do?

It places a deterministic risk boundary around AI intent.

Below threshold: Agents execute at machine speed.

Above threshold: Transactions route to your signing app.

You define the exact financial limit of the agent's autonomy.

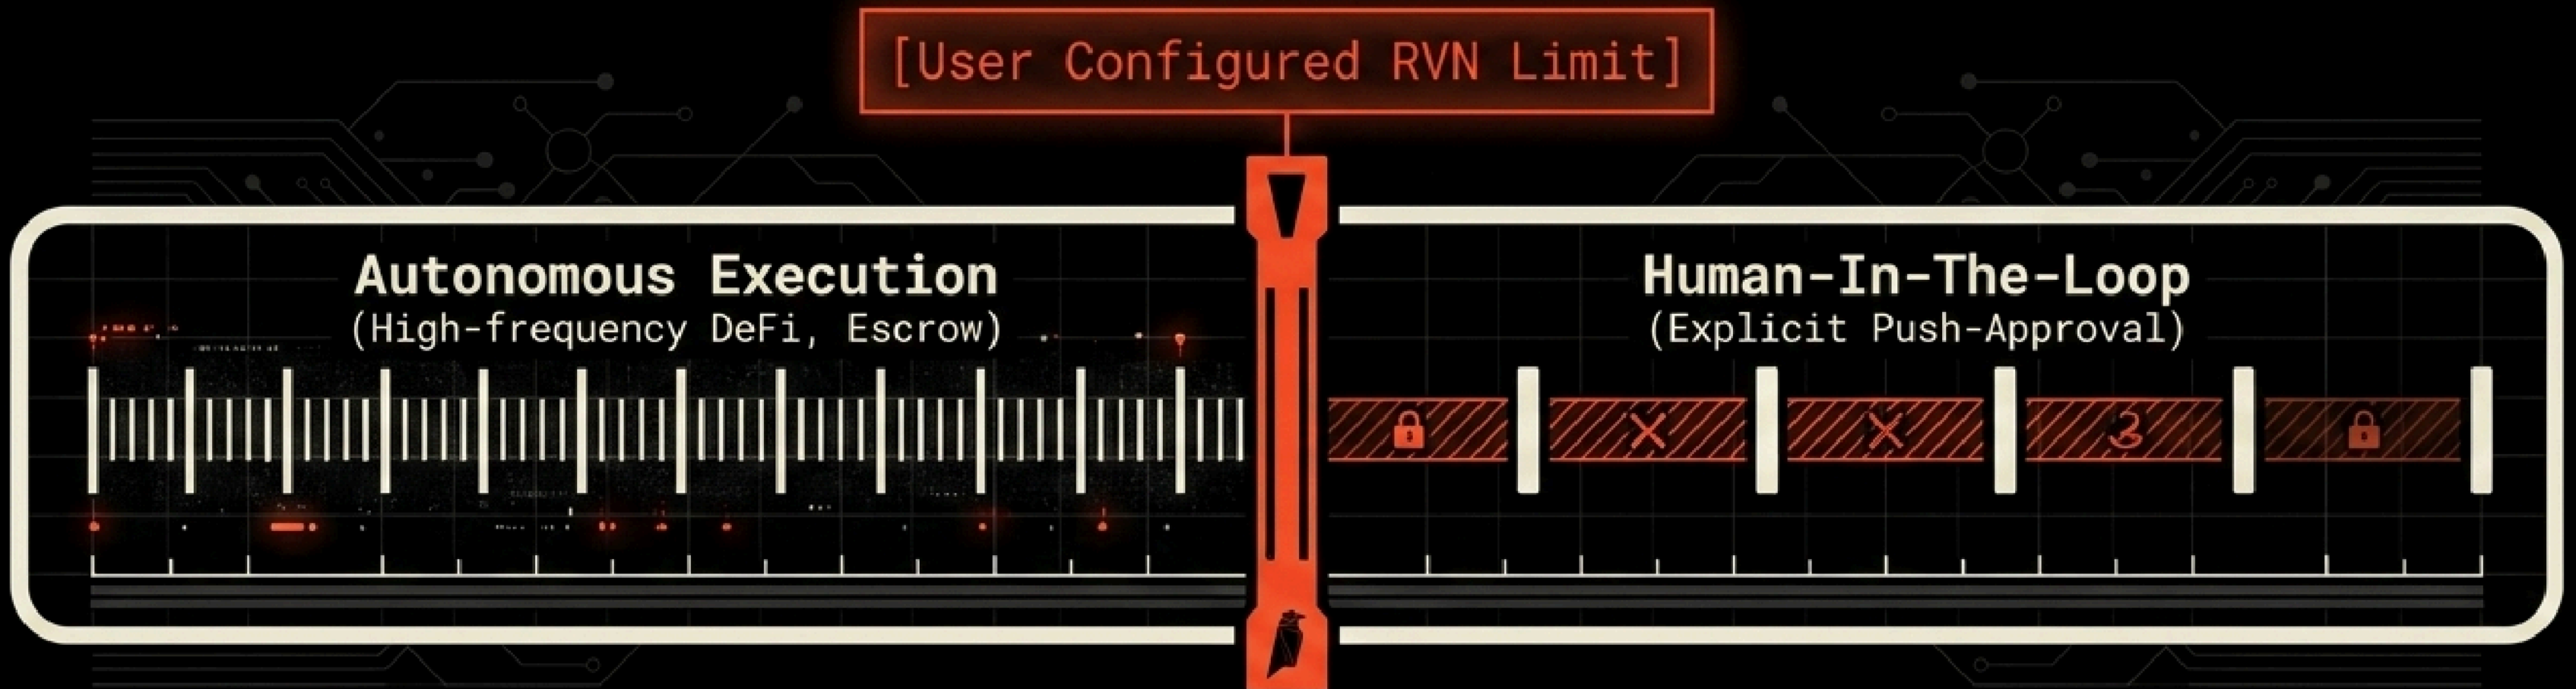

[User Configured RVN Limit]

Autonomous Execution

(High-frequency DeFi, Escrow)

Human-In-The-Loop

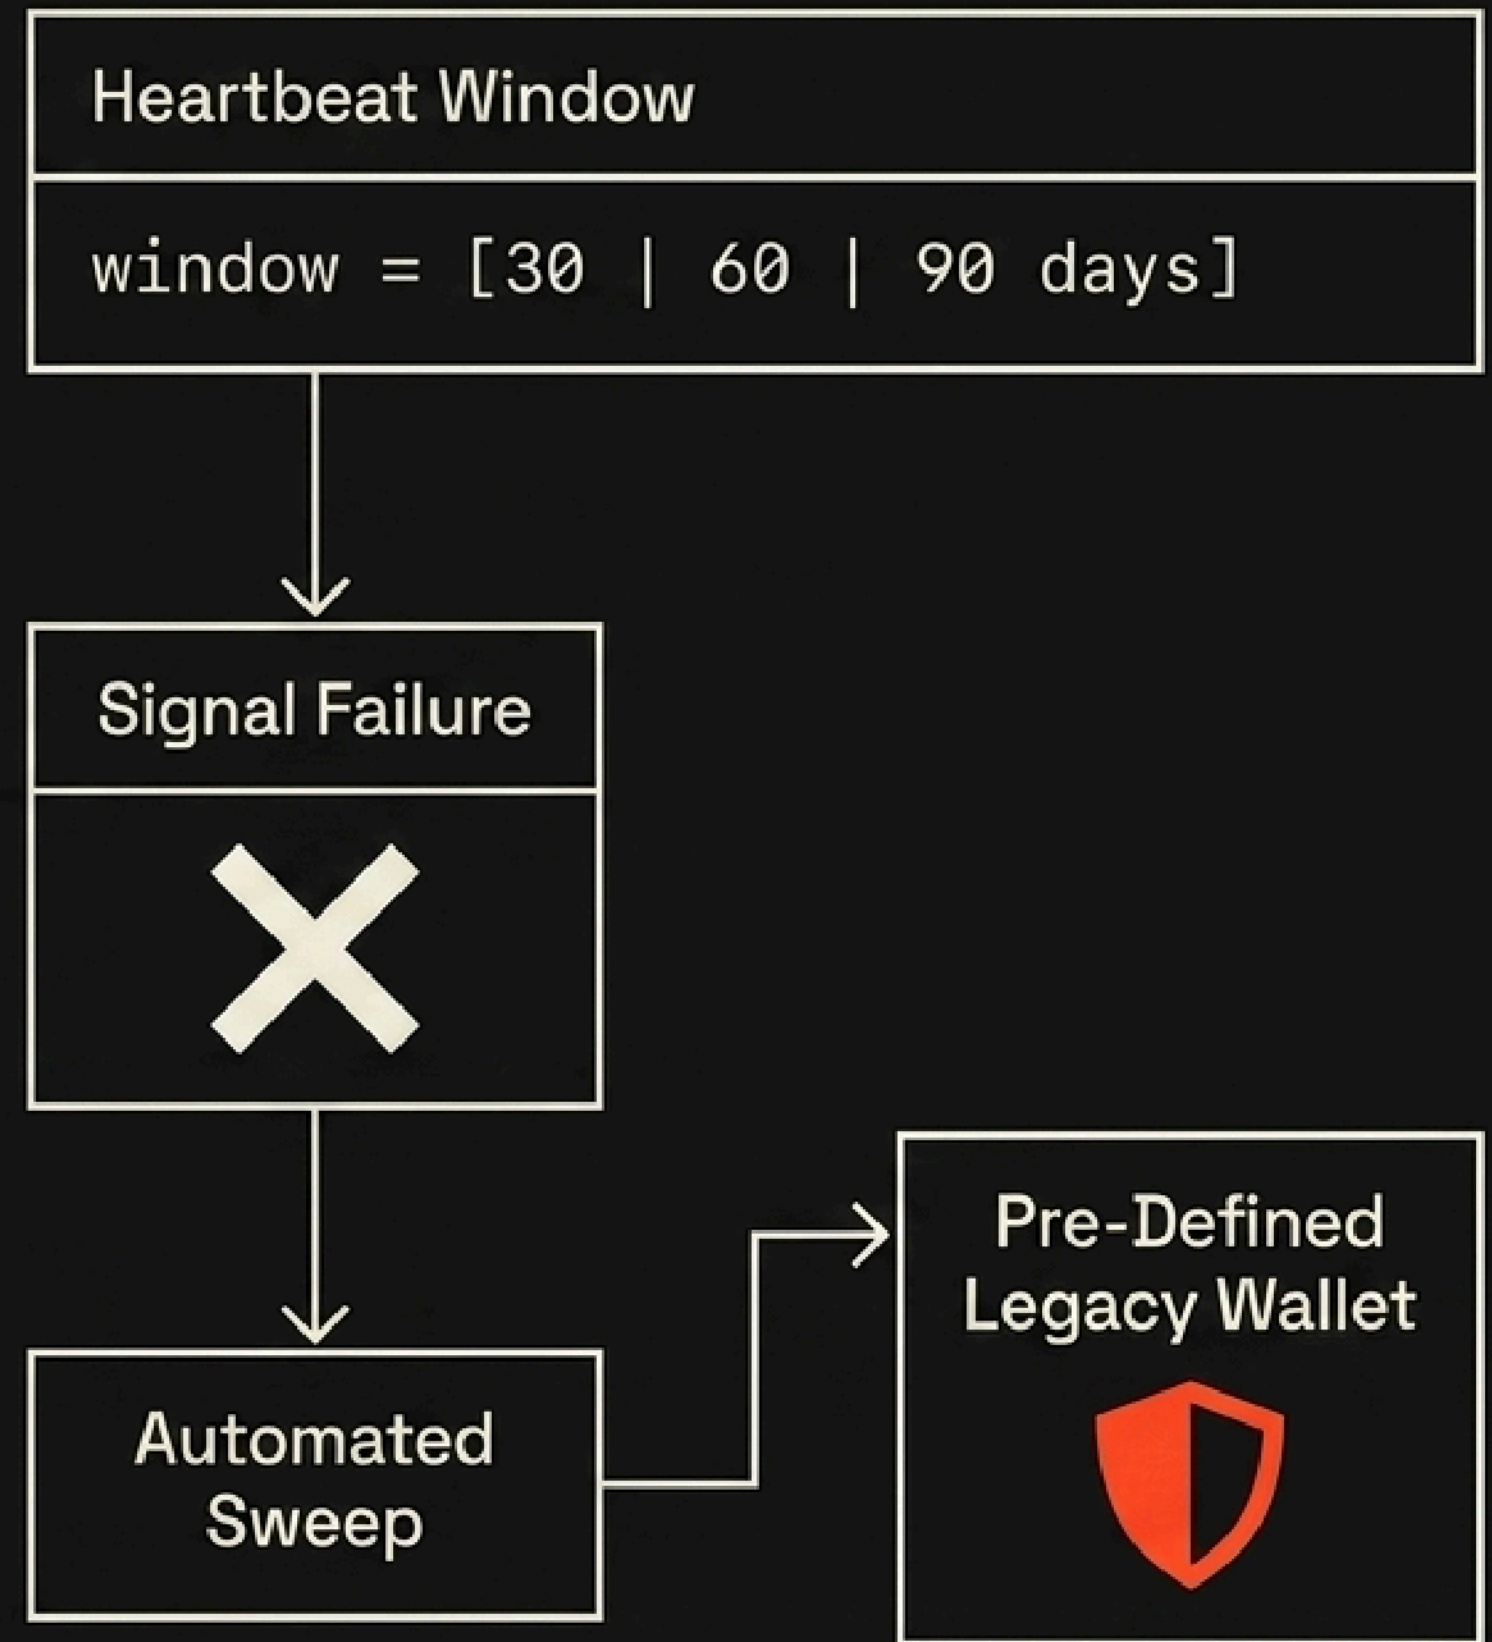

(Explicit Push-Approval)

What is the Dead Man's Switch?

The absolute preservation of heritage assets.

If you fail to sign a heartbeat within your configured window, agents automatically transfer all managed assets to your designated legacy vault.

What is the demo?

Not a slide. Not a promise. A permanent transaction ID.

SoveRaven parsed the memo. Verified heritage.
Enforced deterministic guardrails. Settled on-chain.
Go look it up on the explorer. Trust the chain, not us.

7D21FA8B003499E2B7A5C6D8E9F10A112B3C4D5E6F7A8B9C0D1E2F3A4B5C6D7E

SELL:price=500¤cy=RVN

The next decade of crypto infrastructure relies
on decoupling execution from security.
